

RECOMMENDATION

**Consolidate four PM tools to two.
Save about \$610K a year, 26% of spend.**

Keep Jira for Engineering. Standardise everyone else onto Asana. Retire Monday.com and Trello. Fix the rate and the terms at the Asana renewal, and put a flex-down clause in the contract so idle licences cannot rebuild.

Range: \$540K (conservative) to \$750K (optimistic). The number rests on a modelled Asana rate, not a quote.

One job, four tools, no single buyer

Duplication

~180 people hold licences on two or more platforms. We pay twice for the same person.

Low utilisation

Asana 510 of 650 seats used. Monday.com 230 of 350. Trello 120 of 250. 390 idle seats.

No leverage

Every contract signed separately by a different team. Meridian has never negotiated as one enterprise buyer.

The tools we pay most for, per real user, are the ones we retire

Trello costs \$1,000 per active user and Monday.com \$1,826. Retiring them and rehoming those users onto the standard tool removes the waste without removing the capability.

Keep Jira for Engineering. Standardise the rest on Asana.

Jira

KEEP

Engineering only. Toolchain built around it. They will not move.

Asana

STANDARD

New standard for Product, Marketing, HR, Operations. Largest active base.

Monday.com

RETIRE

Competent but beats Asana on nothing. Users rehomed.

Trello

RETIRE

Lightweight. Hard to justify at Enterprise pricing.

Why not just pick the highest score?

On the weighted scorecard Asana and Jira tie at 4.00. Jira's score is carried by integrations, security and scalability, the things a software org needs and a marketer does not. Asana scores evenly, with its strongest mark on breadth of fit, the criterion that carries the most weight. So the tie is the recommendation: Jira wins for Engineering, Asana wins as the general standard. A scorecard read naively would have merged them and broken one side.

THE SAVINGS

\$2.37M to \$1.76M, with every lever isolated

SAVINGS RANGE

\$540K

Conservative · Asana -8%, Jira untouched

\$610K

Base · Asana -17%, Jira untouched

\$750K

Optimistic · Asana -21% + Jira right-sized

The renewal calendar is the strategy

Why the order matters

Monday.com expires one month before Asana. So I retire a vendor first, in full view of Asana's account team, and walk into the Asana renewal having already proven Meridian will cut a tool that is not earning its keep.

Sequence is leverage. The credible threat to walk is demonstrated before I need it.

"The savings are not in the spreadsheet. They are in the renewal calendar."

The Asana renewal, worked out

Rate per seat on 710 seats

Opening ask	\$900	\$639K
Target	\$1,000	\$710K
Walk-away	\$1,100	\$781K

BATNA: standardise on Monday.com instead. Real, second-best, and Asana does not need to know how much I prefer them.

I trade, I never give

Give (cheap to me): 3-year term · reference rights · upfront payment · seat floor
Take (what I want): rate at target · named CSM · bundled training · sandbox · uptime SLA with credits

The one clause I will not give up

A flex-down clause: the right to reduce seats each year within a band. Everything else is money. This clause is governance. It is the difference between fixing the idle-licence problem once and fixing it every year.

Modelled, not quoted: the \$1,000 target is reasoned from list price and deal shape. A live negotiation settles the exact number; the structure holds regardless.

Numbers, assumptions and the parts I am least sure of

Current vs end state

Vendor	Current	End state	Move
Jira	\$1,050K	\$1,050K	Keep, audit at renewal
Asana	\$780K	\$710K	710 seats @ \$1,000
Monday.com	\$420K	\$0	Retire
Trello	\$120K	\$0	Retire
Total	\$2,370K	\$1,760K	-\$610K / yr

Key assumptions

- End-state Asana = 510 retained + 200 net-new migrated seats = 710.
- Negotiated rate \$1,000/seat vs \$1,200 list (modelled).
- Jira held flat: brief gives no active-user count, so no cut claimed.
- No double count: migrated seats priced at negotiated rate, so the rate cut applies only to retained seats.

The numbers I trust least, in order

1. The 150-person overlap. How many Monday.com/Trello users already hold Asana. Needs a licence-to-headcount join the brief lacks. Moves the answer. **2. Jira.** 44% of spend, zero usage data. Base case claims no Jira saving for that reason. First thing I would audit. **3. The Asana rate.** Modelled from list price and deal shape, not quoted.
